

Our factory has launched a new design of square biscuit tin box this year, specially designed for the food packaging market. This tin box is made of high-quality tinplate material with a thickness of 0.23mm, ensuring the sturdiness and durability of the packaging. The size of the tin box is 152x132x146mm, which can easily accommodate 250 grams of biscuits, making it very suitable for home packaging or gift packaging.

Unique Design and Functionality

The square design of the tin box not only adds a modern touch to the packaging, but also facilitates storage and stacking. Precision craftsmanship ensures the tightness of the lid, effectively preventing air from entering, and keeping the biscuits crisp and fresh. In addition, the surface of the tin box can be printed in a variety of designs according to customer needs, supporting CMYK four-color printing, making the packaging more visually attractive and further enhancing the market competitiveness of the product.

Environmental protection and sustainability

Today, as the concept of environmental protection becomes more and more popular, this tin box is not only beautiful in appearance, but also an environmentally friendly choice. Tinplate materials can be 100% recycled and reused, which helps reduce packaging waste and contribute to environmental protection.

Wide range of application scenarios

This square biscuit tin box is not only suitable for biscuit packaging, but also for packaging other foods such as chocolate, coffee beans, and candy. At the same time, the unique design also makes it an ideal gift box, which is both practical and collectible.

We look forward to this innovatively designed [square biscuit tin box](#) to bring customers a new packaging experience, and also add a unique charm to your products. If you are interested in learning more about or customizing this tin box, please feel free to contact us.
